# Reported Pregnancies and Pregnancy Rates in the District of Columbia, 1994 - 1998

#### Introduction

This report provides statistics on the pregnancies of District of Columbia women which were reported to the Department of Health during the five year period of 1994-1998. The pregnancy outcome categories included in this report are live births, induced abortions, and fetal deaths of at least 20 weeks gestation. Fetal deaths under 20 weeks gestation and abortions not reported to the Department of Health are not included. Abortion reporting is voluntary in the District of Columbia. The Department of Health does not receive reports on abortions performed in private physicians' offices. Also, abortions performed on District residents outside Washington, D.C. are included. However, demographic information on abortions performed on District of Columbia women outside Washington, D.C. is either not available or limited during this five year period.

Annual pregnancy rates were calculated using U.S. Census Bureau mid-year population estimates for July 1994 through July 1998. Prior to 1996, unknown cases were distributed according to the reported age proportions.

#### **Pregnancies**

A pregnancy can have one out of three outcomes: a live birth, a legally induced abortion, or a fetal death. Thus, the number of pregnancies is the sum of live births, legally induced abortions, and fetal deaths. Reported pregnancies decreased 40 percent and pregnancy rates decreased 32 percent between 1994 and 1998. Pregnancy rates decreased each year during the five year period except for 1996, which increased minimally (0.2 percent) from 1995. The 10,679 pregnancies reported to the Department of Health in 1998 were 18.7 percent fewer than the 13,131 pregnancies reported in 1997 (Table 1). The pregnancy rate decreased 17 percent between 1997 and 1998, going from 102.1 pregnancies per 1,000 women aged 15-44 years in 1997 to 84.5 in 1998. Pregnancy rates decreased between 1997 and 1998 in each age group of women. The pregnancy rate of 15-19 year old women decreased 19.3 percent, but the largest decrease was for women 20-24 years of age (27.3 percent) between 1997 and 1998.

The teenage pregnancy rate for 1998 was 122.7 pregnancies per 1,000 women aged 15-19 years,

nearly one and one-half times the birth rate in that year (86.5) (Tables 1 and 4). The teenage pregnancy rate declined 19.3 percent from 1997 to 1998. This decrease also indicates the decrease in the overall number of abortions and births among teenagers. The pregnancy rates for teenagers aged 15-17 years and 18-19 years were 87.4 per 1,000 women aged 15-17 years (17.2 percent decrease between 1997 and 1998) and 166.8 per 1,000 women aged 18-19 years (20.6 percent decrease between 1997 and 1998), respectively (Table 4).

In 1998, 68.3 percent of reported pregnancies to women were Black, 14.3 percent were White, 10.3 percent were other races, and 9 percent were Hispanic (Table 3). It is important to note that persons of Hispanic origin can be of any race.

#### **Live Births**

The number of live births to District of Columbia residents decreased each year during the five year period, 1994-1998. The 7,678 births in 1998 were 22.5 percent less than the 9,911 births in 1994 and three percent less than the 7,916 births in 1997 (Table 1). The fertility rate also decreased each year, going from 68.4 per 1,000 women aged 15-44 years in 1994 to 65.1 in 1995, 62.3 in 1996, 61.6 in 1997, and 60.7 in 1998 (Table 1 and Figure 1). Fertility rates decreased between 1997 and 1998 for women in each age group under 25 years of age and for women 40 years and older. The fertility rates of women 15-19 years old decreased 4.9 percent and of women 35-39 years old increased 2.8 percent between 1997 and 1998. Fifteen percent of the 1998 live births occurred to mothers under 20 years of age. Mothers aged 20-29 accounted for almost one-half (46.4 percent in 1998) of the births.

Seventy percent of D.C. resident women who gave birth in 1998 were Black, 18.1 percent were White, 11.3 percent were other races, and 9.9 percent were Hispanic (Table 3).

#### **Induced Abortions**

The number of reported induced abortions to District of Columbia residents decreased each year during the five year period, 1994-1998 except for 1996. Reported induced abortions decreased 42.9 percent between 1997 and 1998 and decreased 63 percent between 1994 and 1998 (Table 1). The abortion rate in 1998 was 23.2 per 1,000 women aged 15-44 years. Sixteen percent of the 2,937 abortions reported in 1998 occurred among teenagers (under 20 years of age) and 42.5 percent were performed on women in their twenties. Between 1997 and 1998, reported abortions decreased 50 percent for women under 25 and 63 percent for women 25 years and older.

Sixty-three percent of D.C. residents obtaining abortions in 1998 were Black, 4.1 were White, and 6.4 were Hispanic (Table 3).

#### **Fetal Deaths**

The 64 reported fetal deaths of at least 20 weeks gestation in 1998 were 11.1 percent less than the 72 reported in 1997, were 20 percent less than the 80 fetal deaths reported in 1994 (Table 1). During

this five year period, 1998 had the lowest number of reported fetal deaths. Thirty-nine percent of the reported fetal deaths in 1998 occurred among women in their twenties and 37.5 percent occurred among women in their thirties.

Seventy-eight percent of reported fetal deaths in 1998 were to Black women, 18.8 percent were to White women, and 7.8 percent were to Hispanic women (Table 3).

#### **Summary**

In 1998, 71.9 percent of the reported pregnancies ended in live births, 27.5 percent ended in induced abortions, and 0.6 percent ended in fetal deaths of at least 20 weeks gestation (Table 2). Figures 2a and 2b, depicting the percentage of reported pregnancies ending as a live birth or induced abortion, show higher percentages of the reported pregnancies of women under 20 years and women 20 years and older ending in a live birth and lower percentages ending in abortion in 1998 than in 1995 and 1994. The proportion of reported pregnancies ending in a live birth in 1998 varied from 63.6 percent for women under 15 years old to 88.8 percent for women 40 years and older (Figure 3).

1/Unknown cases were distributed according to the reported age proportions. Rates were calculated using Bureau of the Census July 1994 – July 1998 population estimates. 2/Abortion reporting is voluntary in the District of Columbia. Only abortions performed in D.C. and reported to the D.C. Department of Health are included in this table.

3/Includes only fetal deaths of at least 20 weeks gestation.

4/Computed by relating the number of events to women of all ages to women aged 15-44

years.

5/Computed by relating the number of events to women under 15 years to women aged 10-44 years.

6/Computed by relating the number of events to women aged 40 years and over to women aged 40-44 years.

7/As of 1996, unknown cases were no longer distributed according to the reported age proportions.

<sup>1/</sup>Rates were calculated using Bureau of the Census July 1997 and 1998 population estimates.

<sup>2/</sup>Age-specific fertility rate per 1,000 women in each age/age group category.

<sup>3/</sup>Rate per 1,000 women aged 15-19 years.

<sup>\*</sup> The abortion rate is the number of abortions per 1,000 females 15-44 years of age.

<sup>\*\*</sup> The fertility rate is the number of births per 1,000 females 15-44 years of age.
